
I Introduction

par1: snow role in the climate system, global distribution, response to warming and albedo positive (and negative) feedbacks

par2: details on the influence of albedo on SEB, with numbers.

par3: Relationship between albedo and snow physical properties. Changing of grain size <-> metamorphism and impacts on energy absorption/reflection

par4: details about Antarctica, typical snow cover, intra and inter annual variability

par5: specific role of Antarctica snow cover on global climate, interest of monitoring spatio-temporal variability of albedo, role of megadunes (different dynamics on accu/erosion areas)

OBJECTIVE: try to follow albedo evolution with both instruments in situ and satellite —> specific objective is to exploit and compare time series from both OR more accent on geoscientific goal !!! first part here is really about to - describr the problematics (to motivate the study) - study the OBJECTIVE = RESOLUTION TO PROBLEMATICS "This study aims to fill gaps, solve the problem, improve ... Overarching goal is ..."

or

giving the theme at the end of the first paragraph

par5: specificities of this work: infos about the stations (location, typical local climate, functioning and installations), + instruments: MB, weather stations

par6: data availability of the stations: strength = relatively high measurement precision and accuracy, but clearly reduced and ponctual spatial coverage -> interst of coupling with satellite measurements

par7: few words on S3 OLCI - objective: validating satellite with in situ measurements

par8: outline of the work

AT THE END OF INTRO: (in general at the end of every section): What did I actually do ?
Both using I and we - how much did I do ?

OR

At the end of intro, one small section to actually explicit what did I do, and what I just improved, upgraded (never say what I did NOT do)

II Material and methods

1 Theoretical backgrounds

!!! This risks to become "textbook"-like - then, must be SUPER ADAPTED TO MY SPECIFIC GOAL AND BE VERY PERSONAL AND NOT GENERAL AT ALL - PASSIONATING ! write it after matmethods and results

2 Material and instruments

2.1 *In situ*: the Multiband albedometer

2.1.a *The stations*

Cap Prud'Homme

EAIIST

2.2 *In situ*: the Solalb albedometer

2.2.a *Campaigns*

2.3 Satellite imagery: Sentinel-3 Ocean Land and Colour Instrument

2.3.a *Generalities*

Orbit, resolution, swath, revisit time etc.

2.3.b *Data availability*

3 The workflow

Nice flowchart

3.0.a

III Results

PRESENTING MY RESULTS CSI Problem horizontality/titlting ? Calibrations analysis/response symmetry

Do not simply list the results, it can be boring If the conclusion from a result is very fast, just put it in the results

IV Discussion

CONTEXTING MY RESULTS IN SCIENTIFIC LITERATURE Typically no plots

V Conclusion
